

A person in a black shirt and dark pants is skateboarding on a light-colored concrete surface. They are captured in a dynamic pose, leaning forward with one arm raised. A sharp shadow of the skateboarder is cast onto the ground to their right. The background is a vast, open concrete area with some faint blue markings.

ADAPTACIÓN: PROFESOR  
POTĂCHOV DE MOLDAVIA

# Diversity

- You need a mixture of materials – you cannot grow organically from carbon alone, or water alone

# Openness

- Closed systems become stagnant
- Raw materials are depleted
- The system becomes clogged with the 'creative product' of its members

# Autonomy

- The simple cloning of entities does not allow for progress or development
- Each individual entity must manage its own growth in its own way

# Interactivity

- A system cannot grow unless its parts interact – flowers need bees, cows need grain, beavers need trees
- Growth is created not by accumulation but by *flow*, by constant activation and interaction

# Connectivist teaching = Managing Connections

## Personal Learning Landscape

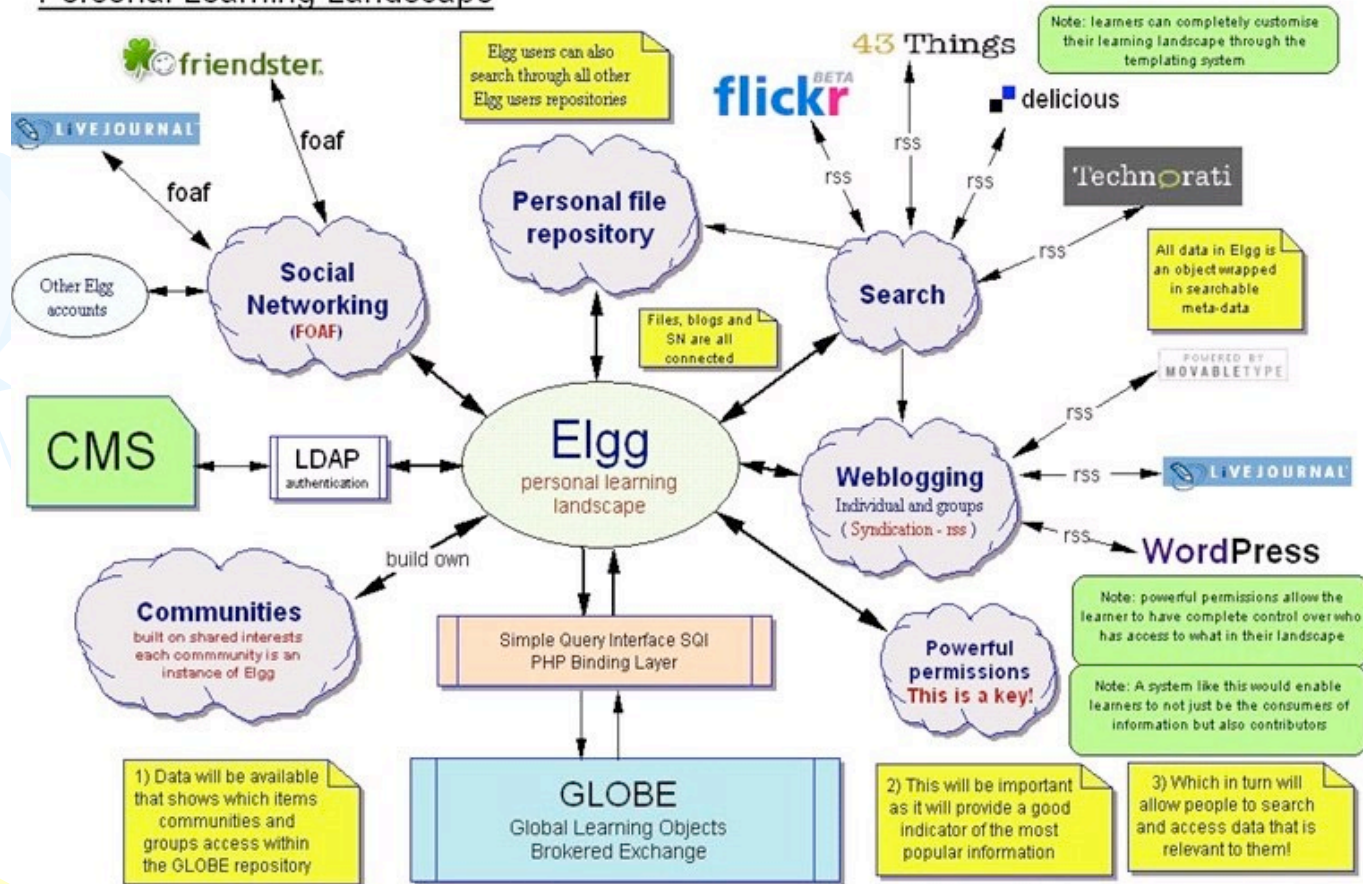

image developed by the Elgg development team - contact [d.tosh@ed.ac.uk](mailto:d.tosh@ed.ac.uk)

# Two Kinds of Knowledge

## Knowledge in the Classroom:

- Static
- Declarative
- Authority-based

## Knowledge in the Network:

- Dynamic
- Tacit / Non-Declarative
- Constructed

# PLEs in a Network

Teachers and students are envisioned as working as a network

# Social Learning

- The next step in such a discussion is usually to describe a theory of social learning, depicting learning as an external process (or set of processes)

# Some Forms of Social Learning

- Behaviourism / Instructivism
- Interaction & Interaction Theory (Moore)
- Social Constructivism (Vygotsky)
- Problem-Based Learning (Johnasson)

Image:

<http://ibis.tau.ac.il/twiki/bin/view/Zoology/Lotem/MyResearch>

# Aspects of Social Learning

- Externally-Based Definitions
  - Learning objectives, Body of Knowledge
- Externally-Based Processes
  - Learning activities, Processes and conversations
  - Interaction and communication
- External Systems
  - Classes, networks, groups, collaboration
- External Evaluation

# Personal vs Social

Social knowledge is *not* personal knowledge

- Personal Knowledge management = Learning
- Social Knowledge Management = Research (or, *social* learning)

The product of the educational system is not a *social* outcome (knowledge, skill, problem, community) but a *personal* outcome

Image: [http://www.stalipius.com/?page\\_id=43](http://www.stalipius.com/?page_id=43)

# Personal Knowledge

We are using one of these

Figure 1. Biological Neuron

To create one of these

Personal knowledge consists of *neural* connections, not social connections

# Learning Outcomes

Simple vs complex – text vs network

“Paris is the capital of France”

It's the difference between:

- 'Knowing' that 'Paris is the capital of France' or even some sort of 'knowing how' (these are *external* definitions of this knowledge) and
- What it *feels like* to have geographical knowledge; what it *feels like* to be a speaker of a language

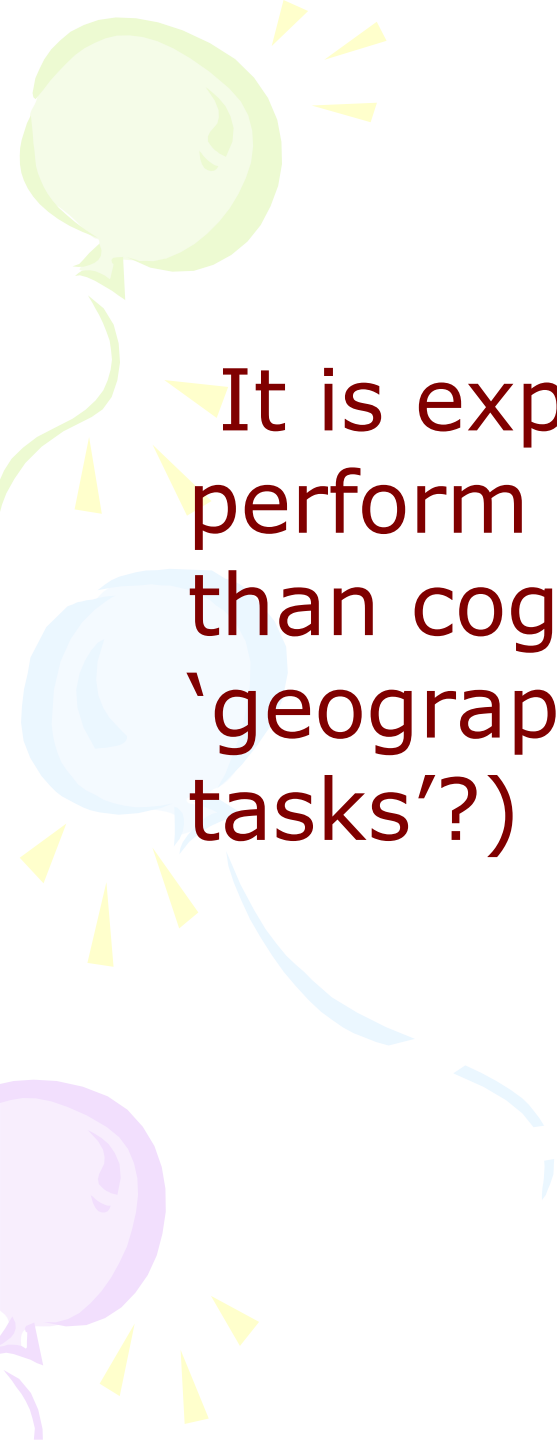

Learning a discipline is a *total state*  
and not a collection of specific states

It is obtained through *immersion* in an environment rather than acquisition of particular entities

Image: <http://www.perthenglish.com/English/aboutus.html>

A decorative graphic on the left side of the slide featuring three balloons: a green one at the top, a blue one in the middle, and a purple one at the bottom. Each balloon has a string and is surrounded by several small, yellow, triangular streamers.

It is expressed functionally (can you perform 'as a geographer'?) rather than cognitively (can you state 'geography facts' or do 'geography tasks'?)

Figure 1. Biological Neuron

We recognize this

By performance in this

There are not specific bits of knowledge or competencies, but rather, personal capacities

- It

(Total  
pers

(How do I know this? Research on how neural networks grow,

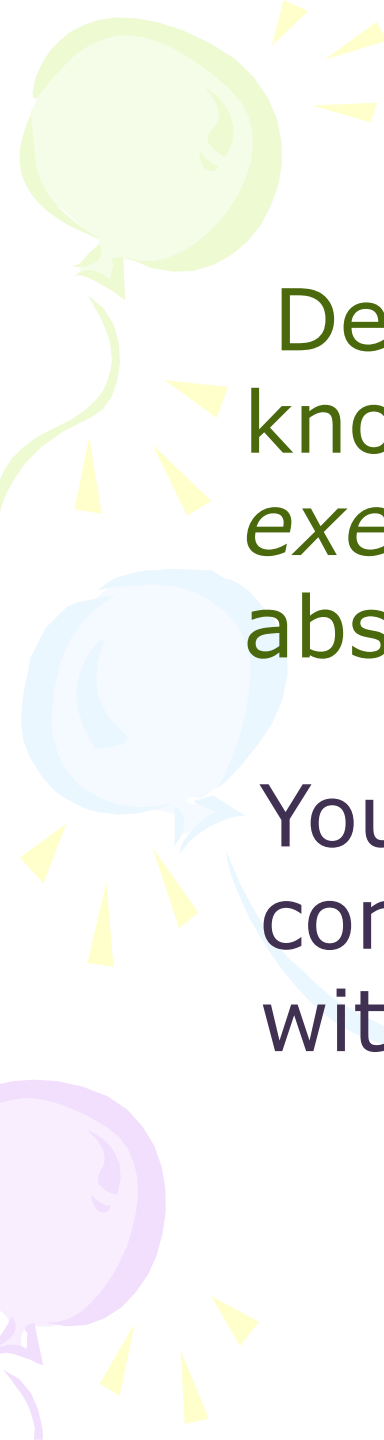

# PLE as Exercise Machine

- A PLE is a tool intended to *immerse yourself* into the workings of a community
- Once immersed, you then *practice* being one of the people characteristic of the community

For example, you would learn philosophy by practicing 'being a philosopher' in a philosophical community

A decorative graphic on the left side of the slide features three balloons in green, blue, and purple, each with a yellow streamer and several yellow triangular flags.

Developing personal  
knowledge is more like  
*exercising* than like inputting,  
absorbing or remembering

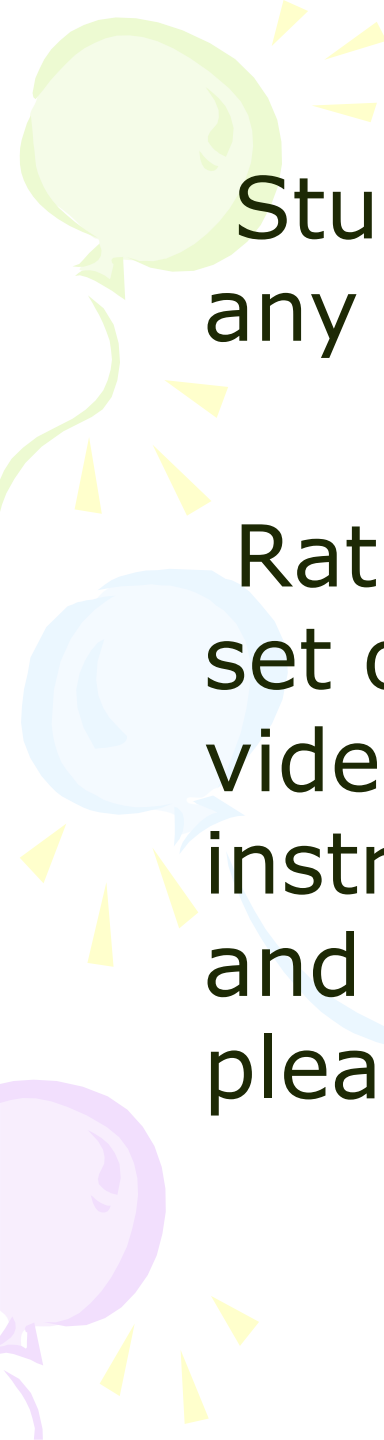

Your personal growth develops as a  
consequence of the interactions  
with that community

# The Connectivist Course

Information is not 'taught' in a course offered using a personal learning environment. In the connectivist model of learning, course 'content' is created by the course participants themselves.

A decorative graphic on the left side of the slide features three balloons in light green, light blue, and light purple, each with a yellow streamer and several yellow triangular confetti pieces scattered around them.

Students are not asked to perform any task in particular.

Rather, they are presented with a set of resources (readings, audio or video, email postings) from the instructors and other participants, and may do with these what they please.

Typically, a student in a connectivist course will:

- read (some of) the readings and listen to or watch some of the recordings
- post comments in threaded discussion forums
- create a blog and post comments and responses
- contribute content to the course wiki

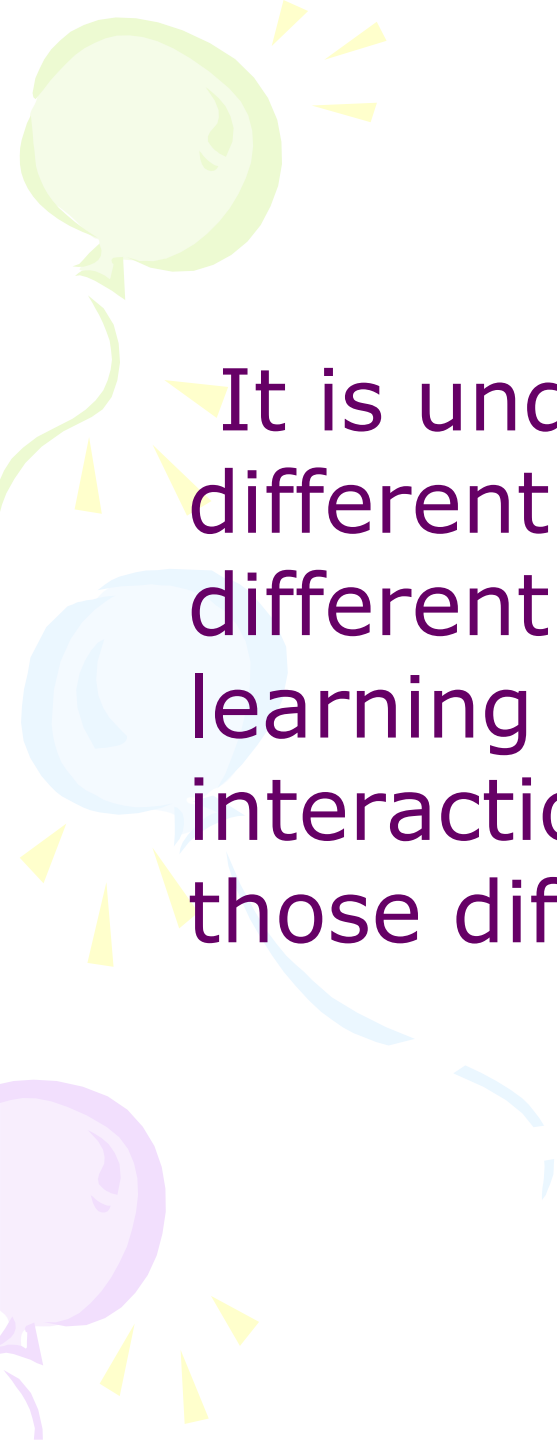

In practice, students have engaged in a wide range of (generally unexpected) activities, such as:

- create a map of course participants
- establish, design and host seminars in a Second Life environment
- create videos of discussions
- Create Google or Yahoo groups
- organize translations of course materials
- create concept maps of course structures
- host live online forums

A connectivist course does not consist of a single identifiable group of people stepping through the same activity.

A decorative graphic on the left side of the slide featuring three balloons: a light green one at the top, a light blue one in the middle, and a light purple one at the bottom. Each balloon has a small streamer and is surrounded by several small, yellow, triangular shapes that resemble confetti or streamer pieces.

It is understood and expected that different students will undertake different activities, and that new learning will emerge through the interactions of students engaged in those different activities.

A Connectivist course therefore has two major modes:

1. a creation of an environment (and expectation) of great diversity, creating multiple points of view on an amorphous body of material, domain or discipline

2. creation of new and unexpected knowledge as a result of the interaction of participants from those different points of view
