

The LMS and the MOOC

Stephen Downes

MoodleMootUY,
Montevideo, Uruguay

November 22, 2012

- **Title: The LMS and the MOOC**
- **Abstract:** With the widespread adoption of the massive open online course (MOOC) over the last year, questions are now being raised about the role of a learning management system (LMS) such as Moodle. Where previously the focus was on the management of course materials and cohorts progressing according to predefined objectives and curricula, the learning environment of the future is more open-ended and less overtly managed. In this talk Stephen Downes, one of the originators of the MOOC format, describes the differences between types of MOOCs, compares them to the LMS, and outlines the changes LMSs such as Moodle are looking at in the future.

1. The Classic Model
2. A bit about MOOC Structure
3. The Connectivist Courses
4. Improving MOOCs
5. Reconceptualizing MOOCs
6. The Education Platform

1. The Classic Model

A Typical Course

The screenshot displays a Moodle course interface for 'BRED_Test'. At the top, the Moodle logo and course name are visible, along with buttons for 'Turn editing on' and 'Turn student view on'. The breadcrumb trail shows 'moodle-test > Moodle Pilot > BRED_Test', and the user is logged in as 'Admin User (Logout)'.

We are now using Moodle 1.7.2+
by [Jeff Crawford](#) - Saturday, 25 August 2007, 04:45 AM

The Technology Department is pleased to announce that the EGRPS Moodle System has now been upgraded to version 1.7.2+!

This is a significant upgrade from the previous version, 1.5.3+.

This is just a milestone upgrade. The Technology Department plans to perform one more Moodle upgrade before the start of the 2007-2008 school year.

Thanks,
Jeff Crawford
Manager of Networking and Security
East Grand Rapids Public Schools

The Massive Open Online Course (MOOC) #change11

[To Register for this Course, Click Here!]

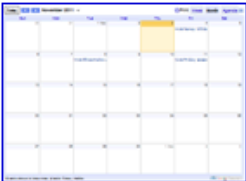

Being connected changes learning. When those connections are global, the experience of knowledge development is dramatically altered as well. Over the past four years, a growing number of educators have started experimenting with the teaching and learning process in order to answer critical questions: "How does learning change when formal boundaries are reduced? What is the future of learning? What role with educators play in this future? What types of institutions does society need to respond to hyper-growth of knowledge and rapid dissemination of information? How do the roles of learners and educators change when knowledge is ubiquitous?"

Experimenting with answers to these questions has produced what is now called "massive open online courses" or MOOCs. Three of us - George Siemens, Stephen Downes, and Dave Cormier - have had over 10,000 participants in the various courses we've run since 2008. The learning experience has been terrific. We've refined our pedagogical approaches, improved the software (well, actually, just Stephen did that), and developed a research agenda around learning in networks in open online courses.

We've always been a bit uncomfortable being the sole facilitators of open courses - knowledge, after all, is networked. To grow knowledge is to grow connectedness and diversity.

A screenshot of the Livestream webcaster control panel. It features a video preview window showing a man with long hair and glasses. Below the preview are controls for 'MONITOR' (LOCAL, REMOTE, OFF), 'GO LIVE', and 'RECORD' (ON). A banner for 'livestream procaster' is visible. To the right, there are tabs for 'CHAT', 'PROMOTE', 'RECORD', 'ACTIVITY', and 'SETTINGS'. The 'SETTINGS' tab is active, showing options for 'VIDEO' (USB Video Class Video, Aspect Ratio 4:3, Frame Rate 13, Quality LOW/MED/HIGH) and 'AUDIO' (Built-in Microphone, Input Volume 50, VU Meter, Quality LOW/MED/HIGH). At the bottom, there are buttons for 'OPEN STUDIO', 'CHANNEL PAGE', 'WATCH', 'PLAYER EMBED', and 'COPY'.

Mix of levels – novice and experienced

The network structure

<http://cor-ar.blogspot.in/2012/03/two-distinct-course-formats-in-delivery.html>

Aggregation – bringing together

The abundance of content

- Some analogies:
 - following football – there are more games in the world than you could possibly watch
 - recipes – there is more food in the world than you could possibly eat, more ways of eating food than you could experience in a lifetime
 - places to visit – the world is vast, you cannot possibly see everything

Social versus Solo

Success in a MOOC

FIVE STEPS TO
SUCCEED IN A
MOOC

- 1 ORIENT
- 2 DECLARE
- 3 NETWORK
- 4 CLUSTER
- 5 FOCUS

0:44 / 4:17

<http://www.youtube.com/watch?v=r8avYQ5ZqM0>

Self-Education

Bates: “They belong philosophically within the context of thinkers such as R. H. Tawney, Ivan Illich and Paulo Freire, who believed strongly in self-education, as part of their broader socialist views on equality, the need to open access to knowledge, and to educate the workers in order to break the existing hegemony, etc.”

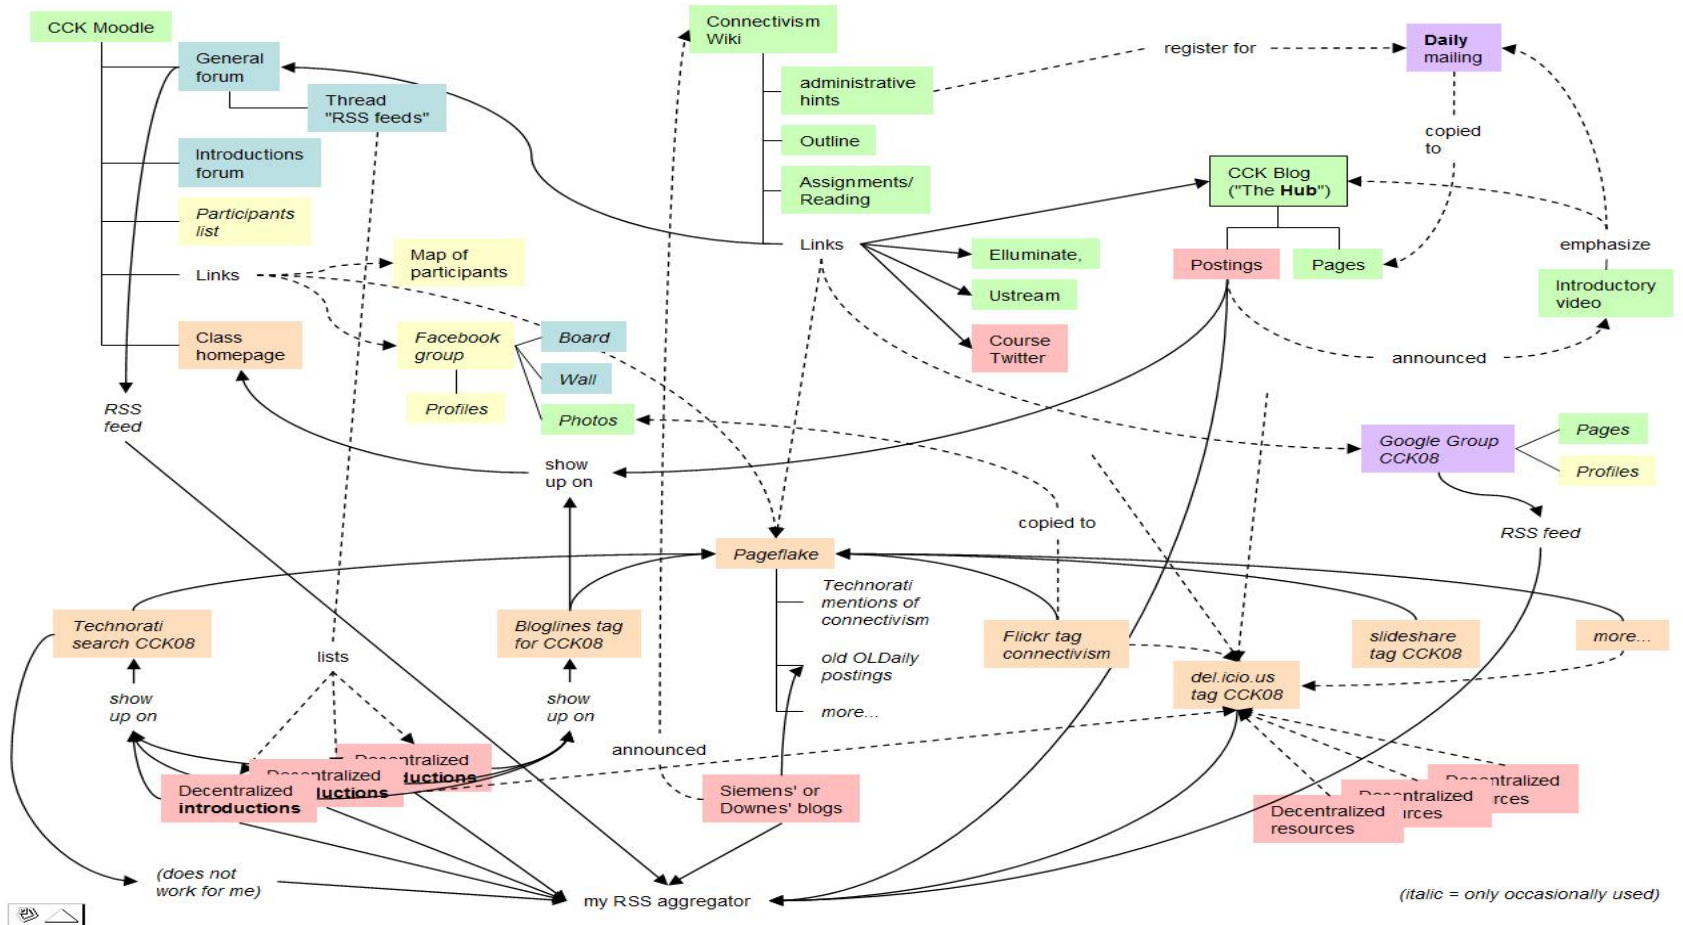

<http://www.tonybates.ca/2012/03/03/more-reflections-on-moocs-and-mitx/>

Knowledge as Grown

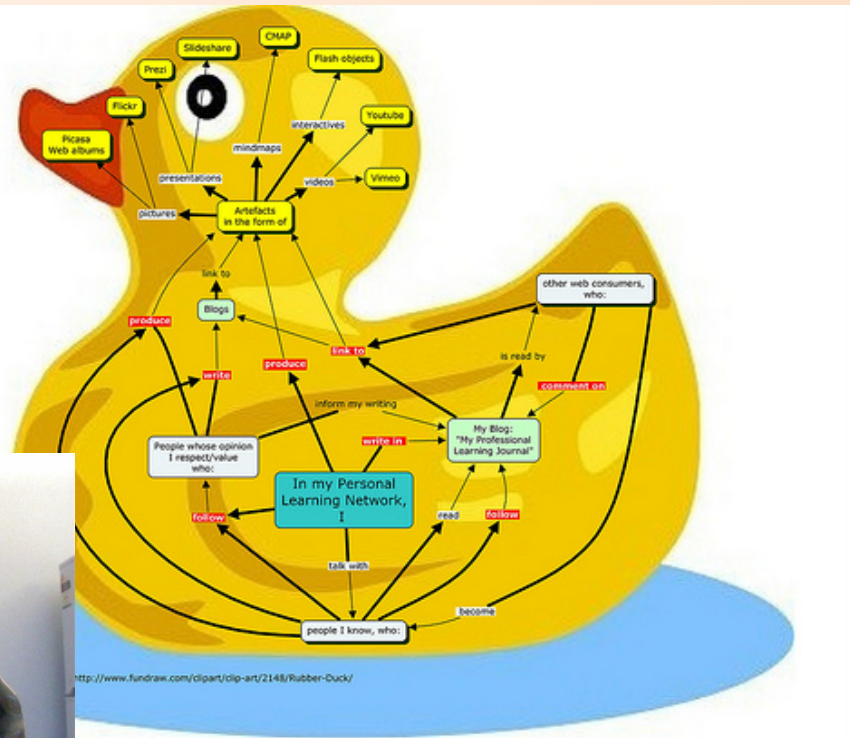

There is a contrast between knowledge as something that is acquired, ingested, retained, remembered, and knowledge that is something that is grown as a response to experience rather than as a representation of it

4. Improving MOOCs

The Bootstrap Problem

<http://www.tonybates.ca/2012/03/03/more-reflections-on-moocs-and-mitx/>

Navigation

Size versus Connectedness

Lisa Chamberlin and Tracy Parish

<http://elearnmag.acm.org/featured.cfm?aid=2016017>

Elitism

Effectiveness

- What is learning if it isn't learning content?
How can we assess it, credentialize it?

Assessment and Analytics

It makes no sense to rely on quizzes and tests

- Big Data, Web of Data, Semantic Web, RSS, Geo, FOAF...
- Mash-ups, APIs, the Cloud, Social Network

Learning Outcomes

We are using one of these

Figure 1. Biological Neuron

To create one of these

Personal knowledge consists of *neural* connections, not facts and data

Learning Outcomes

- Learning a discipline is a *total state* and not a collection of specific states
- It is obtained through *immersion* in an environment rather than acquisition of particular entities
- It is expressed functionally (can you perform ‘as a geographer’ ?) rather than cognitively (can you state ‘geography facts’ or do ‘geography tasks’ ?)

Learning Outcomes

Figure 1. Biological Neuron

We recognize this

By performance in this

There are not specific bits of knowledge or competencies, but rather, personal capacities
(more on this later)

5. Reconceptualizing MOOCs

Open

- everybody can participate – but more importantly, there are many ways to participate
 - ‘open’ means being able to watch
 - ‘open’ means being able to participate at your own level
 - ‘open’ means participating publicly, so others can watch

Online

- means that it is connective, interactive
- You can't put a MOOC on a DVD
- The MOOC is the *process*
- It is a process that is greatly aided by being online
 - many tasks are automated, scaffolded
 - much greater communicative capacity
 - more access to data, calculations

Connective

- To the extent that a MOOC is about content, the MOOC fails
 - it's like confusing the learning of a game, or the playing of a game with memorizing the rules of a game
 - it's like confusing enjoying food and knowing how to cook with the memorization of recipes
 - it's like confusing the experience of travel with knowing where things are on a map

Restating the Problem

- our MOOCs are insufficiently connective, and tend to slip toward an emphasis on content
 - the form of connectivity – online conversation – is at once too simplistic and too complex
 - looking for other ways to connect – eg., artwork (a la ds106) or activities/projects (but these have been *very* poorly defined in our courses)

Rediscovering Process

- As we fail to provide process, the courses revert to their old ways
 - people think the course is about the content
 - they gravitate toward dependence on the leadership, and away from personal participation
- It's not that we don't scaffold enough, it's that there are not opportunities for participants to 'play'

MOOC, Meet Game

- The MOOCs we have offered have been very high level, involving professional presentations and conversations – but what would a MOOC look like for a 10-year old?
- My answer: it would look like a game

Budget Simulators

Choices **NEXT**

baseline as well as figures for many options and added results. Try it even if you have done the simulator before.

YOUR CHALLENGE:
Stabilize the U.S. Debt at 60% of GDP by 2018.

To begin the simulation, click the "Next" button above. There are 8 categories where your choices will affect the debt. Negative numbers next to a choice indicate how much the debt will be reduced, positive numbers add to the debt. Use the "Next" and "Back" buttons to navigate to each section; do not use your browser's navigation arrows. Click the "Done" button when finished making all the choices you want. The bar graph on the right will chart how your choices affect the debt-to-GDP ratio relative to the 60% goal. Visit the FAQ page for more on how the game works.

i For more information on any choice simply click the icon to the left of that choice.

STABILIZE THE U.S. DEBT

Your goal is to achieve 60% of GDP by 2018

The bar chart displays the current debt-to-GDP ratio as a red bar reaching 69% on a scale from 0% to 60%. A blue arrow points to the 60% goal line, which is labeled with a blue line and the text '\$12.8 Trillion'. The current debt level is labeled '69%' and '\$12.8 Trillion'. A legend at the bottom right indicates that the red bar represents 'Your Debt as a % of GDP'.

69% **60%** **0%**

\$12.8 Trillion

CLICK FOR A LIST OF YOUR CURRENT CHOICES

CLICK FOR A LIST OF ALL POSSIBLE CHOICES

■ Your Debt as a % of GDP

\$1,970 Dollars in Billions that you need to cut to get under 60% of the GDP by 2018

<http://crfb.org/stabilizethedebt/>

What's Wrong With The Simulators

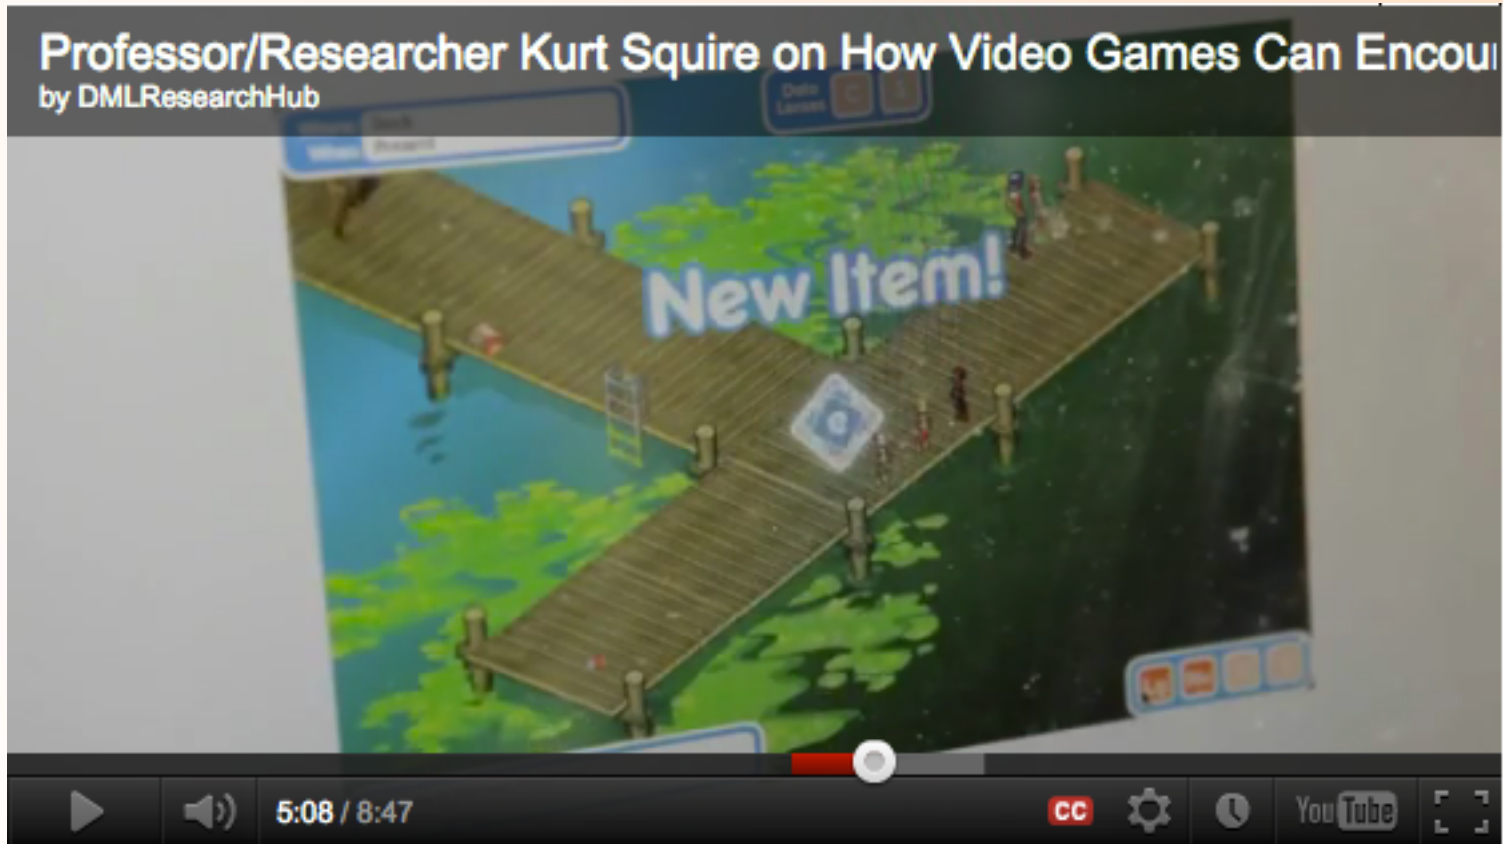

- they try to 'teach' – but instead become propaganda
- they reduce complex problems to simple fixes

6. The Education Platform

Critiquing the games

<http://www.downes.ca/post/57523>

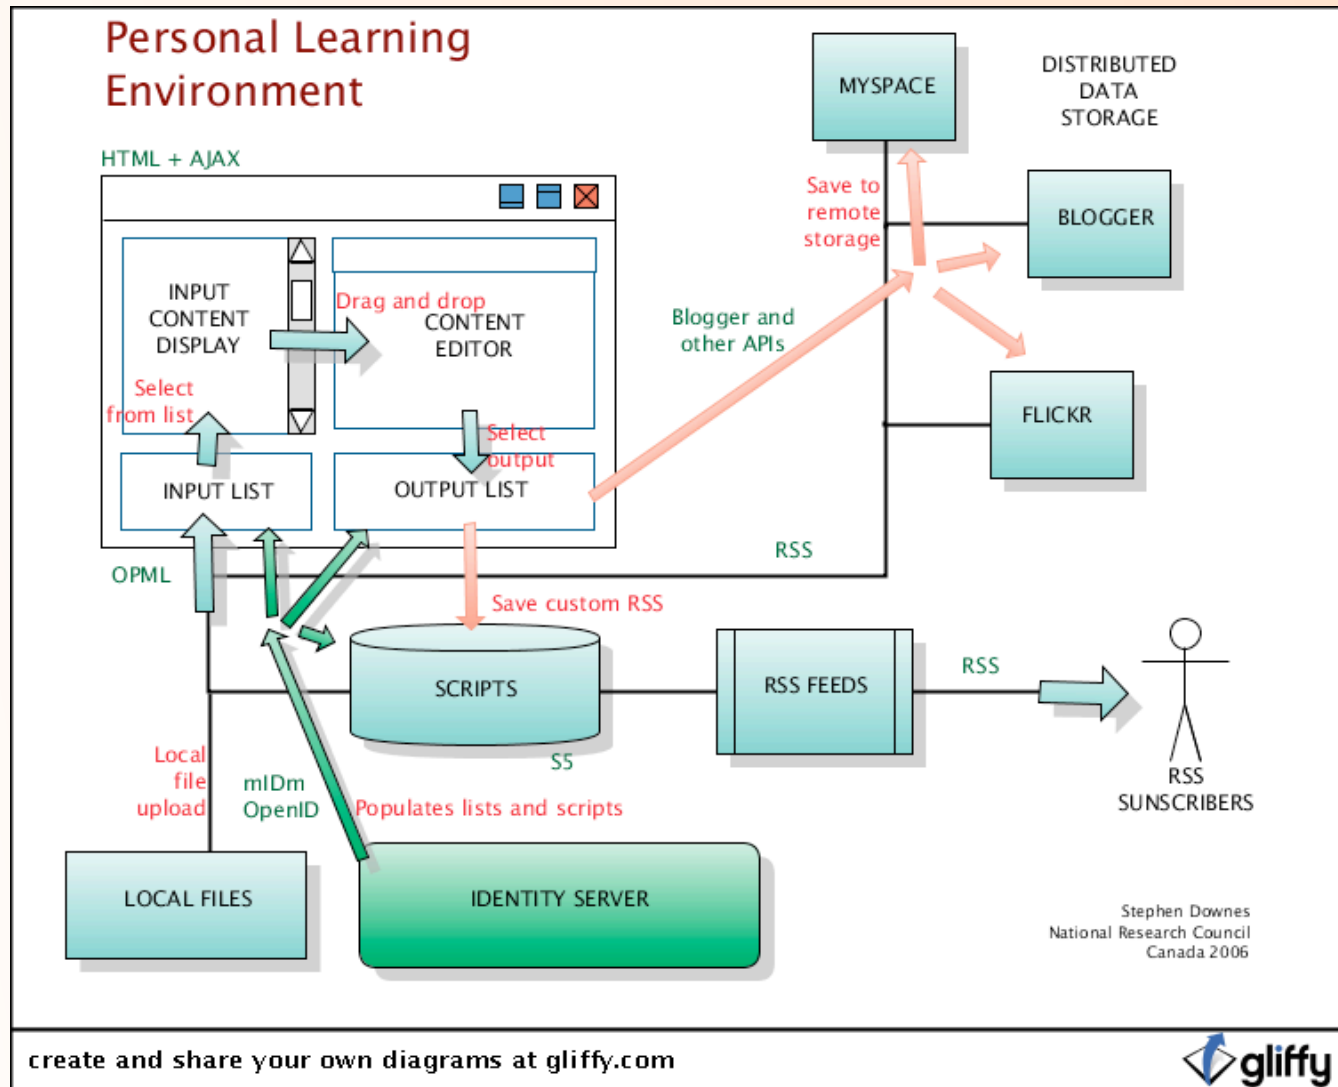

The Paucity of Badges

The Emptiness of Analytics

Personal Learning Environment

The Connectors

- Things – events, games, arenas, etc., to ‘connect’ individuals with each other
 - either as plug-ins on individual PLEs, or
 - as third-party services, like scrabble.net

Conversation?
Chess game?
Simulation?

Language Games

<http://www.popmatters.com/pm/post/65550-games-as-language-systems>

Ladders, Vectors, Networks

- Chess and other person-to-person games rank people in 'ladders' (people want to run schools this way too)
- One way to think of a network is as a multidimensional ladder
- Ranking is therefore 'position' in a network

<http://www.downes.ca>
